                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                3']. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not and Eco RI sites of the modified pT/T3 vector. Library went through one round of normalization, and was constructed by Bento Soares and M. Fatima Bonaldo."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           plasmid DNA from the normalized library NCI_CGAP_CO10 was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1057416-1061255, and 1144584-1145351). Subtraction by Bento Scares and M. Fatima Bonaldo. Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    nucleic search, using

This sequence encodes a novel human P2 receptor, P2Y4, which has a preference for pyrimidine binding, especially uridine triphosphate. This receptor could be used to screen for novel drugs which specifically bind to it. Transgenic animals could be used to determine the physiological effects of expressing varying levels of the receptor or to identify novel agonists or antagonists. The agonists and antagonists of human P2Y4 may be used, e.g., in treatment of cystic fibrosis.

                                                                                                             G-protein coupled receptor protein DNA and protein - also methor for isolating (ant)agonists for treatment of cystic fibrosis, incontinence and diabetes

S Claim 12; Page 269; 360pp; English.

C A cDNA clone (T18368), designated phAH2-17, codes for a novel by the coupled receptor protein (G-protein Coupled receptor primers (see also T13910 and T13913) based on a mouse cDNA clored primers (see also T13910 and T13913) based on a mouse cDNA clored primers (see also T13910 and T13916-67, Q18369-73 and T13901-C)

C may be used in the prodon. of recombinant G-pcRps, in the prepnounce of transgenic animals, and also for gene therapy.

```

26-AUG-1996 (first entry)

Mouse pancreas G-protein coupled receptor protein cDNA pMAH2-17.

G-protein coupled receptor protein; G-PCRP; agonist; antagonist;

Cystic fibrosis; incontinence; diabetes; diagnosis; gene therapy.

T18367;

T18367

standard;

Mus sp. W09605302-A1

A cDNA clone (T18367), designated pMAH2-17, codes for a mouse pancreatic beta-cell strain MINN-derived 6-protein coupled receptor protein (G-PCRP) (R91224). It was obtd. by PCR amplification of MINS cDNA using primers (T18347-48) based on the transmembrane domains of known G-PCRPs. Such cDNA sequences (see also T18366-73, and T13901-09) may be used in the prodn. of recombinant G-PCRPs, in the prepn. of transgenic animals, and also for gene therapy. carcinoma; neoplasia; cancer; cystic fibrosis; hypertenning blood pressure; infertion;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated human placenta purinergic P-2u receptor (PNR) gene used to develop prods. for the diagnosis and treatment of conditions associated with altered expression of the receptor e.g. inflammation [Claim 2; Page 27; 36pp; English.

747730 encodes a human placenta-derived purinergic P-2u receptor designated PNR. P-2u is specifically expressed in cells active in immunity. An assay for up-regulated expression of PNR can accelerate diagnosis and proper treatment of conditions caused by abnormal signa transduction due to systemic and local infections, traummatic and other tissue damage, hereditary or environmental diseases associated with hypertension, carcinomas, cystic fibrosis and other physiological probability of the property of the pr
                                                                                                                                                                                                                                                                                                                                                                                                                                                              with hypertension, carcinomas
or pathological problems.

This is the full length cDNA of a novel P2U purinergic receptor gene CC homologue. It was identified using the inventive method and comparison between the partial sequence found in Incyte clone 179696 (from a CC placental cDNA library) and the GenBank sequence, accession number CC RNU09402, a G-protein coupled surface receptor from rat. The method CC comprises: (a) subjecting nucleic acid from a genomic or cDNA library cypected to contain partial cDNA, to reaction with a PCR primer pair, CC which is able to anneal to opposite strands of the template DNA and to initiate outward DNA synthesis, where one is extended by DNA polymerase in the antisense direction and the other in the sense direction, to CC extended sequences derived from the partial cDNA or genomic DNA. The CC method is used to produce much longer DNA (complete genes in some cases) from libraries which have been used for sequencing. It may also be used to extend known genomic sequences for detection and amplification of corocessed at a time, and the extended or complete sequence is obtained CC within 6-10 days, an approximate 10-fold improvement in productivity.

CR using two primers (Q66174, Q66175) was performed to amplify a CP partial sequence of the R20 seven transmembrane coding sequence CP which was later used as a probe for isolating the R20 genomic clone CP (Q66176) from a human placenta DNA library. During the isolation CP of the R20 gene, two weakly hybridising sequences were identified CP which had significant homology to other seven transmembrane CP eceptors. The probe was used to screen a human genomic foetal CP liver DNA library, and while the R20 gene could not be identified in this library, several weakly hybridising clones were plaque purified, subcloned and sequenced. The two clones were designated CP R2 (Q66177) and R12. This is the coding sequence of the R12 clone. Sequence 1901 BP; 381 A; 640 C; 508 G; 372 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    맑
